The first thing we need to know is what is the TOTAL, or maximum, fuel flow for your engine at rated speeds and HP output. In this case, and most any 250-450 HP 6 cylinder diesel that uses an ND EP-9 type or Bosch P7100 fuel injection pump (or a system of similar design), just assume the fuel flow is about 1 GPM.

### Fuel Pump Relay Wiring Diagram | Fuse Box And Wiring Diagram

After leaving the pump, fuel flows through the fuel filter. The filter's paper element is fine enough to block particles that could cause an injector malfunction, but not so fine that it restricts the flow of fuel. No replacement interval is given. Replace the fuel filter when fuel flow is less than the service limit. Note:

### Honda Programmed Fuel Injection How It Works

One line goes from the fuel tank to the primer bulb, from the primer bulb to the carburetor, and back to the fuel tank. Be careful to not put a fuel line too near a hot place on the engine. If the gas is overheated it will vapor lock and stop fuel flow. Be aware of anything that could rub or vibrate against a fuel line and cause a leak.
