Investigation 8 Energy And Recycling Answers
Recycling saves energy in the production of new products. Making a product from recycled materials almost always requires less energy than is required to make the product from new materials. For example, using recycled aluminum cans to make new aluminum cans uses 95% less energy than using bauxite ore, the raw material aluminum is made from.

Recycling and energy - U.S. Energy Information ...
Compare energy costs of recycling aluminum for cans to making cans from raw materials. Investigate extrinsic benefits and disadvantages of recycling, such as environmental and economic factors. BACKGROUND. The county government in one eastern state initiated an aluminum recycling program. Most of the aluminum is in the form of beverage cans.

Energy and Recycling
Although the amount of energy saved depends on the material being recycled, almost all recycling operations result in energy savings. 8 In 2014, over 89 million tons of municipal solid waste (food, plants, glass, boxes, cans, batteries, electronics, plastics, etc.) were recycled or composted in the United States, saving over 322,000 GWh of ...

How does recycling save energy? | American Geosciences ...
Overall energy and land use will depend on the type and density of housing developments in an area. Part E If current trends continue, with parents in the U.S. choosing to have fewer children on average (for example, 1 or 2 children versus 3 or more), how will future household sizes be affected?
