The Mesoscopic Theory of Polymer Dynamics. The theory presented in this book explains in a consistent manner all dynamic effects (diffusion, neutron scattering, viscoelasticity, optical birefringence) observed in very concentrated solutions and melts of linear polymers from a macromolecular point of view. This monograph reconciles different approaches to polymer dynamics and reflects the modern situation in understanding the relaxation behaviour of the polymer systems.

Mesoscopic physics is a subdiscipline of condensed matter physics that deals with materials of an intermediate length. These materials range in size between the nanoscale for a quantity of atoms (such as a molecule) and of materials measuring micrometres. The lower limit can also be defined as being the size of individual atoms.

Mesoscopic physics - Wikipedia

Polymer physics is the field of physics that studies polymers, their fluctuations, mechanical properties, as well as the kinetics of reactions involving degradation and polymerisation of polymers and monomers respectively.. While it focuses on the perspective of condensed matter physics, polymer physics is originally a branch of statistical physics. Polymer physics and polymer chemistry are ...

Theory and Simulation: Polymer Mechanics

In addition, the C++ code embodying these simulations, entitled Engine for Mesoscopic Simulations for Polymer Networks (EMSIPON) is described in detail. A crosslinked network of cis-1,4-polyisoprene is chosen as a test system. From the thermodynamic point of view, the system is fully described by a Helmholtz energy consisting of three explicit contributions: entropic springs, slip springs and non-bonded interactions.

Mesoscopic description of solvent effects on polymer dynamics

A microscopic mode-coupling theory of entangled linear chain polymer melts and solutions has been developed. Coupled generalized Langevin equations of motion for the segments of a tagged polymer are derived and two new fluctuating cage forces emerge associated with intermolecular excluded volume and chain connectivity.
